

# Scavenger Hunt

## Pollinators

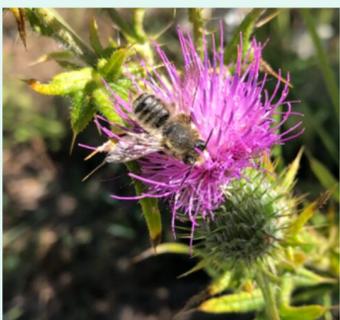

### Lorquin's admirals

Lorquin's admirals usually live in deciduous forests or riparian zones, and will eat nectar or bird droppings.

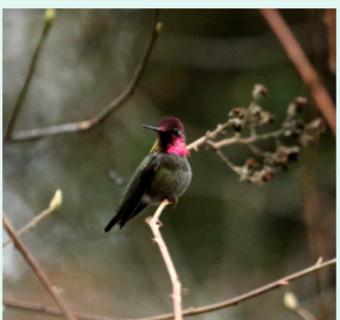

### Skipper Butterflies

These butterflies get their name from their flying habits; they dart around quickly through the air.

### Leaf-cutter Bee

Leafcutter bees use their mandibles to cut small circular pieces of leaf to make nests for their eggs.

### Anna's hummingbirds

Anna's hummingbirds have green backs, pale grey chests, red feathers on their throat and males have a red head.

### Hoverfly

While they share the same colour pattern of bees, these fast fliers are actually of the diverse family Syrphidae.
